[ProjectInfo]

Glass with integrated SEFAR® Architecture VISION fabric changes between transparency and reflection and can mirror the beauty of a place in many ways. Like the Hyundai project where the fabric is embedded in panels all over the facade of this R&D Center.

SEFAR® Architecture VISION fabrics AL 260/25 and CR 260/25 are coated with metals, have a transparency of 25 % and offer an ideal privacy. They are laminated into safety glass.
